

***Ohio Medical Center in Wheeling, West Virginia and East Ohio Regional Hospital in Martins Ferry, Ohio***

I am currently seeking a pharmacist to develop and implement clinical services for our two facilities. While I know that some hospitals require residency completion for a clinical pharmacist position, I am open to new graduates and to those without any residency or specialty experience. We're starting from "square one" clinically, and I believe that a person with the right skill set and passion for clinical services can get us off the ground and help our pharmacy program get to the next level.

The position will be strictly clinical - not a staffing split - and will be a "9-5" Monday through Friday routine. My hope is to bring in someone who can design and implement various aspects of clinical services (including those that impact core measures), and then integrate some of them into the daily routine for our staff pharmacists to help with maintenance.

**Clinical Pharmacist: To research, develop, and maintain programs. Must have strong analytical skills and clinical knowledge. Excellent written and verbal communication skills required. Must be detail-oriented, self-directed, and able to efficiently multi-task. BS or PharmD, active WV or OH license, prior clinical experience highly preferred.**
